

Kest Mixer, KM

For outstanding mixing performance in critical pharma and biotechnology applications.

DS-000003 EN REV E

Kest Mixer, KM

The Kest Mixer is a magnetic coupled mixer. With its aseptic design and excellent mixing performance it has become a popular choice for critical pharma and biotech applications.

The Kest Mixer KM range covers mixing volumes up to 22 000 litres. The Kest Mixer is designed for CIP/SIP applications.

Easy operator handling of the drive unit is secured by our patented Kest-Lock Connection. With our advanced Speed Sensor technology you will have a reliable process control.

The Kest Mixer KM range can be customized to perfectly fit your needs. We can modify the mixing head to mix to the last drop or manufacture the parts that have media contact in specific materials, please contact your reseller for a quote.

The Kest Mixer KM range is also available in an ATEX version, see separate data sheet for more information.

Kest Mixer range for various mixing applications

Kest has developed several product lines for various mixing applications and clean room needs. The KMS product line was developed for LAF applications and the Rapid Motion

(RM) line for medium shear force generation. See separate data sheets on the other product lines in the Kest Mixer family or contact your reseller for more information.

We bring flow to your mixing process

Our mixers and components have one purpose: to make your mixing process flow. 24/7. To ensure predictable and compliant results. To minimize maintenance. To minimize waste. To maximize the value created by your mixing process.

✓ Perfect mixing result

After years of experience developing mixers this mixer will deliver a perfect mixing result over and over again.

✓ Integrated speed sensor

The mixer is equipped with an integrated speed sensor that measures the speed of the mixing head, that the mixing head is in place and that it rotates in the right direction.

✓ Full integrity of the tank

The magnetic coupling between the mixing head and drive unit ensures total integrity of the tank. All tank plates are FEM analyzed according to PED & ASME.

✓ ZERO particle shedding

The robust bearing combination of Zirconium and Sic and the fine-tuned geometry, ensures no particle generation.

*

✓ Mixing low level volumes

Due to the low building height of the mixer head along with a lot of wing area close to the bottom it can handle continues mixing of low levels.

✓ Mixing to the last drop

The wings fixed position close to the tank bottom and the possibility to run the mixer during emptying of the tank, ensures full product recovery.

✓ Minimize downtime

The low weight of the drive unit and our patented Kest-Lock connection ensures quick disconnection from the tank plate during maintenance.

* The external test, according to USP<788> PARTICULATE MATTER IN INJECTIONS, could not detect any particles from the bearing.

Kest Mixer KM, general information

Mixing Head

Male Post

Tank Plate

Drive Unit

Stainless steel Cover
(optional)

Speed Sensor
(optional)

The Kest Mixer is a magnetically coupled mixer containing 4 modules, Mixing head, Male Post, Tank plate and Drive Unit.

To secure the integrity of the tank, the tank plate is welded into the tank, the mixing head and drive unit couples through magnetic forces. When installing the tank plate, make sure to use our welding tool and to follow the welding guideline.

Select the appropriate model, download the Kest Mixer selection guide as a support. For complex mixing applications contact your reseller for consultation.

Decide upon optional drive unit features like Speed sensor, stainless steel cover or extension. You will find the order information, Ref. No., for each part in this data sheet.

THE DRIVE UNIT IS TO BE OPERATED BY FREQUENCY CONVERTER. CONVERTER PARAMETERS TO BE VALIDATED FOR EACH PROCESS APPLICATION IN RELATION TO VOLUME, VISCOSITY ETC.

ALWAYS USE A WELDING TOOL AND FOLLOW THE WELDING GUIDE LINE WHEN INSTALLING A KEST MIXER TANK PLATE

Kest Mixer KM, Speed Sensor (optional)

The Kest Mixer speed sensor unit is a integrated sensor system that enables secure verification of the actual rotation of the mixer head.

An integrated function in the Kest-Mixers speed sensor also verifies that the mixer head is in place in the tank and that it is rotating in the correct direction.

The unit consists of a sensor, that is located underneath the magnetic rotor, and a converter unit, that is located on the drive unit.

The output signal from the sensor is 1 pulse/rotation as standard.

For visual indication of the different functions there are three different LED,s located on the converter unit indicating the following functions:

- **Green LED: Power supply**
- **Yellow LED: Clockwise rotation**
- **Blue LED: Signal/Pulse**

The sensor and cable are designed for +150°C to cope with the temperatures in the tank plate during sterilization, the rest of the unit is designed for up to +40°C. The converter unit is located on the motor/gearbox.

MECHANICAL SPECIFICATIONS

	Sensor holder	Cabel	Converter housing
Material grade	POM C	5 meter, open ends	PMMA

KM-120/230	1 pulse / rotation	6 pulses / rotation
KM-230/600	1 pulse / rotation	8 pulses / rotation
KM-600/1300	1 pulse / rotation	6 pulses / rotation
KM-1300/2300	1 pulse / rotation	12 pulses / rotation

Kest Mixer KM, cover (optional)

The KM range can be equipped with a stainless-steel cover to protect the drive unit. The stainless-steel cover drastically improves the external cleanability of the drive unit.

Only drive units with extension L1 can be equipped with the stainless-steel cover.

MODEL	A1 mm [in]	B1 mm [in]	C1* mm [in]	D1 mm [in]
KM-0/3	352 [13.858]	205 [8.071]	100 [3.937]	176 [6.929]

*Cover only available on drive unit with extension

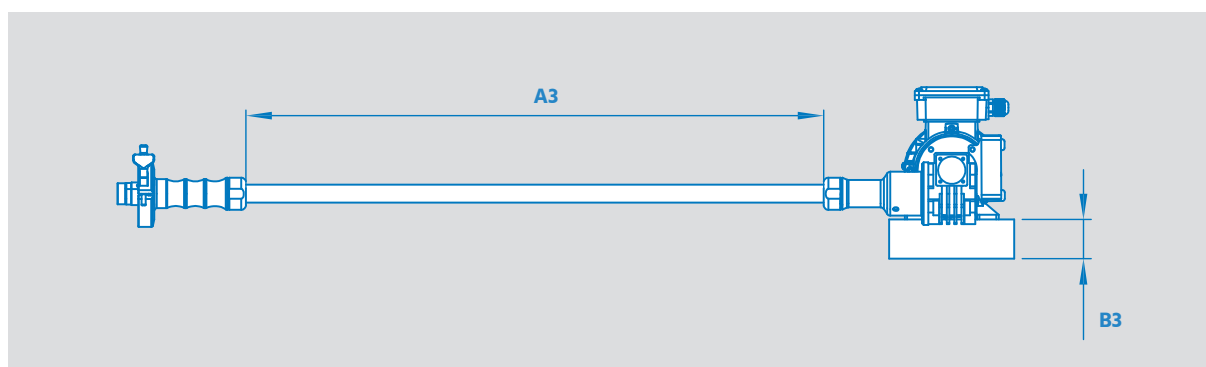

Kest Mixer KM, Remote drive (optional)

This new innovative drive unit allow you to get rid of the motor/gearbox from the tank. This is good for saving space and to remove the load upon the tank itself, you can even place the drive unit in a different room.

The drive magnet is connected to a flexible cord and with the Kest-Lock connection it is very easy to remove from the tank. The weight of the handle and drive magnet is significantly lighter than the entire motor and gearbox, which improves ergonomics.

The Kest Remote drive can be equipped with our popular integrated speed sensor system that measures the actual speed of the mixing head as well as securing the correct rotation direction.

MODEL	A3* mm [in]	MIN BEND RADIUS** mm [in]	B3 mm [in]
KM-0/3	1500 [59]	100 [3.937]	50 [1.969]
KM-3/7	1500 [59]	100 [3.937]	50 [1.969]
KM-7/20	1500 [59]	140 [5.512]	50 [1.969]
KM-20/70	1500 [59]	240 [9.449]	50 [1.969]
KM-70/120	1500 [59]	240 [9.449]	50 [1.969]

*For other lengths contact Kest or your reseller.

** The bend radius cannot be smaller than this value.

Kest Mixer KM, lowering device (optional)

During maintenance and inspection of the mixing head and male bearing, you need to cancel the magnetic force acting on the mixing head from the drive unit. Removing the drive unit on larger mixer sizes can sometimes be a heavy and time-consuming job. To get around this problem Kest has developed a lowering device. By removing a protective lid and

turning a nut you can easily lower the magnetic rotor and cancel the magnetic force acting on the mixing head without removing the drive unit from the tank plate. The option is also available with our popular integrated speed sensor system.

Smaller KM sizes with lowering device is quoted on request.

MODEL	A2 mm [in]	B2 mm [in]	C2 mm [in]	D2 mm [in]	E2 mm [in]	F2 mm [in]	ØG2 mm [in]	ØH2 mm [in]	I2* mm [in]

*Weld flange thickness

Selection guide

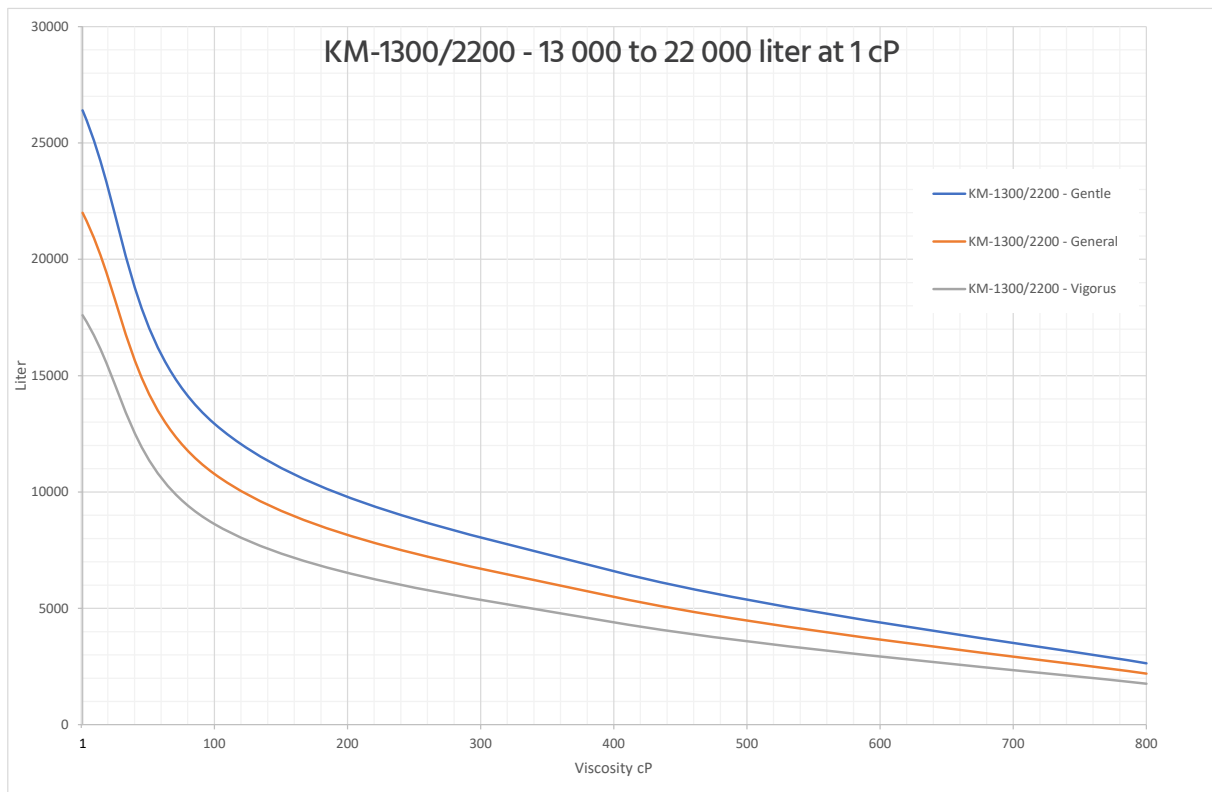

The mixer is selected after volume and desired mixing type based on the viscosity of the media. The different mixer sizes are targeting a specific volume range based on viscosity of 1 cP. Depending on the viscosity you might need to go for a larger size even if you are in the target volume. The characteristics of the General, Gentle and Vigorous mixing is subjective and built on experience. See example in the end of the selection guide on how to select correct mixer size.

Example:

You want to select a mixer that shall generate **General mixing**

The max mixing volume is 500 liters

The viscosity of the media is 100 cP.

Start with the mixer graph that has the correct range at 1 cP, KM20/70 has the range of 200 to 700 liter at 1 cP. Look at the graph at 100cP (on the horizontal axis) and follow it up to the orange line (General mixing) and read the value of the vertical axis to find out what the maximum mixing volume is at viscosity 100 cP.

In this case it is 340 Liter, go to the next size KM70/120 and check the maximum mixing volume in the same way. KM70/120 has the maximum mixing volume of 590 liter at 100 cp, this is enough for the application.

For this application you need the KM-70/120 mixer.

For higher viscosities you might need to go up several sizes to find a mixer that with the sufficient capacity.

Gentle mixing and Vigorous mixing are variations of the General mixing, for support contact your local distributor or Kest.

Test center

Mixing can be simple and complex, this selection guide sizes the mixer to the correct capacity. Mixing performance can be affected by many different factors, if you need support with your mixing application, we have long experience and an inhouse fully equipped test center. Do not hesitate to contact us with your mixing application.
