

## Saint-Gobain Life Sciences – Bioprocess Solutions

# **PharmaPure**<sup>®</sup>

Low Spallation Peristaltic Pump Tubing

#### PharmaPure® Flexibility

PharmaPure<sup>®</sup> is a premium, low spallation, biologically compatible peristaltic pump tubing developed especially for pharmaceutical, biotechnology, and laboratory applications. This tubing provides excellent pump life with ultra-low particulate spallation and very low gas permeability compared to standard silicone tubing.

#### Lower Spallation, Lower Risk of Contamination

The superior flex life characteristics of PharmaPure<sup>®</sup> simplify biopharmaceutical manufacturing processes by reducing production downtime due to pump tubing failures.

Its excellent wear properties allow the product to provide extremely low rates of spallation as compared to silicone and other alternate materials.

Because PharmaPure® has low permeability and lower absorption characteristics, it is ideal for protecting sensitive fluids from gas ingress and concentration changes due to fluid absorption.

#### **Fully Characterized and Biocompatible**

PharmaPure<sup>®</sup> tubing comes complete with biocompatibility, physiochemical and extractable testing which can be found in the <u>Validation Guide Summary</u> on the Saint-Gobain Bioprocess Solutions website.

#### Features / Benefits

- •Ultra-low particulate spallation
- •Outlasts silicone tubing in peristaltic pumps
- •Provides an excellent barrier with very low permeability
- •Withstands repeated autoclaving
- •Custom mold and design capabilities

#### **Typical Applications**

- •Cell harvest and media process systems
- Vaccine manufacturing
- Bioreactor process lines
- Aseptic filling
- •Diagnostic test products
- Production filtration and fermentation

\*Working pressures are calculated at a 1:5 ratio relative to burst pressure using ASTM D1599.

## **Typical Physical Properties**

| Property                                    | ASTM Method | Value or Rating |  |
|---------------------------------------------|-------------|-----------------|--|
| Appearance                                  |             | Opaque White    |  |
| Durometer Hardness Shore A, 15 Sec          | D2240-00    | 65              |  |
| Maximum Service Temperature., °F (°C)       |             | 275 (135)       |  |
| Low Temperature Embrittlement °F (°C)       | D746-98     | -89 (-67)       |  |
| Water Absorption, %, 24 hours @ 73°F (23°C) | D570-98     | 0.04            |  |

Unless otherwise noted, all tests were conducted at room temperature (73°F). Values shown were determined on 0.075" thick extruded strip or 0.075" thick molded ASTM plaques or molded ASTM durometer buttons.

The values listed for working and burst pressures are derived from tests conducted under controlled laboratory conditions. Many factors will reduce the tubing's ability to withstand pressures including temperature, chemical attack, stress, pulsation and the attachment to fittings. It is imperative that the user conduct tests simulating the conditions of the application prior to specifying the tubing for use.

www.romynox.nl

#### **Comparative Peristaltic Pump Tubing Life**

The table below depicts hours until failure of 1/4" ID x 3/8" OD tubing. In each case, a 3-roller pump head was utilized operating at 600 RPM under room temperature ( $73^{\circ}$ F). Tubing failure is measured in hours of use prior to rupture.

The performance of tubing in peristaltic pumping applications is affected by the conditions of use and equipment utilized, along with size and wall thickness of the tubing tested. The data above is presented for information only and should not be utilized for specification purposes.

#### **Sterilization Methods**

| Autoclavable         | Yes   |
|----------------------|-------|
| Gas (Ethylene Oxide) | Yes   |
| Gamma IR             | 25kGy |

#### **Spallation Rate Tubing Comparison**

The following test data summarizes the spallation results of select tubing used in a peristaltic pump. In each case 1/4" ID tubing was used in a 3-roller pump head operating at 600 RPM under room temperature (73°F). Results from a minimum of 5 samples were averaged to obtain values.
